

India Hydrological Outlook

April 2026

Water and Climate Lab, IIT Gandhinagar

National Drought Summary

About 15.3% of India's area is in some level of drought (D0 or worse), with 84.7% at normal conditions. Severe-to-extreme drought (D2 or worse) covers roughly 0.2% of the country. Compared with the previous week, the drought-affected area contracted. Conditions reflect the balance of pre-monsoon rainfall, soil moisture and runoff captured in the Combined Drought Index, with the most persistent stress across rain-fed parts of peninsular and central India.

Rainfall Percentile

Monthly rainfall expressed as a percentile of the historical record. Low percentiles (red) indicate drier-than-normal conditions, high percentiles (blue) indicate wetter-than-normal conditions.

Temperature Anomaly (°C)

Surface air temperature anomaly compared to the long-term mean for the same month. Negative values (blue) indicate cooler-than-average conditions; positive values (red) indicate warmer-than-average conditions.

Relative Wetness (%)

Soil-moisture anomaly (60 cm depth) as a % of maximum (positive wetness) or minimum (negative wetness) soil moisture anomaly.

Total Runoff Anomaly (mm)

Total runoff anomaly compared to the long-term monthly mean. Red (negative) = deficit, blue (positive) = surplus runoff.
