

Combined Drought Index (CDI) for the week ending April 1, 2026.

Summary

For the week ending April 1, 2026, about 18.0% of India's area was in some level of drought (D0 or worse), with 82.0% at normal conditions. Severe-to-extreme drought (D2 or worse) covered roughly 0.5% of the country. Compared with the previous week, the drought-affected area contracted (-1.6 percentage points). Conditions were driven by the balance of pre-monsoon rainfall, soil moisture and runoff captured in the Combined Drought Index, with the most persistent stress across rain-fed parts of peninsular and central India.

Regional Outlook

North shows widespread drought: about 49% of the region is in drought (D0–D4), with pockets of severe-or-worse conditions.

Northwest shows largely normal conditions: about 3% of the region is in drought (D0–D4).

Northeast shows mostly normal conditions with localised dryness: about 13% of the region is in drought (D0–D4).

East shows moderate, scattered drought: about 24% of the region is in drought (D0–D4), with pockets of severe-or-worse conditions.

Central shows moderate, scattered drought: about 23% of the region is in drought (D0–D4), with pockets of severe-or-worse conditions.

West shows mostly normal conditions with localised dryness: about 13% of the region is in drought (D0–D4).

South shows mostly normal conditions with localised dryness: about 5% of the region is in drought (D0–D4).
