

Combined Drought Index (CDI) for the week ending June 3, 2026.

Summary

Most of India is currently under normal conditions, with drought impacts confined to scattered clusters rather than affecting large contiguous regions. Abnormally dry to moderate drought conditions (D0–D1) are observed across parts of northwestern India, central India, and the Northeast, while severe to extreme drought conditions (D2–D3) occur in localized hotspots in Maharashtra, Haryana–Delhi, Jammu & Kashmir, and several northeastern states.

The most drought-affected states include Maharashtra, where about 42% of the area falls under drought categories (D0–D4), followed by Haryana, Arunachal Pradesh, Jammu & Kashmir, Meghalaya, and Mizoram. Exceptional drought (D4) is limited to small areas in Maharashtra, Manipur, Mizoram, and Jammu & Kashmir.

Regional Outlook

North Moderate, scattered drought. About 28% of the area is in drought (D0–D4).

Northwest Largely normal conditions. About 4% of the area is in drought (D0–D4).

Northeast Moderate, scattered drought. About 27% of the area is in drought (D0–D4). Pockets of severe-or-worse conditions are present.

East Mostly normal, with localised dryness. About 7% of the area is in drought (D0–D4).

Central Mostly normal, with localised dryness. About 15% of the area is in drought (D0–D4). Pockets of severe-or-worse conditions are present.

West Moderate, scattered drought. About 22% of the area is in drought (D0–D4).

South Mostly normal, with localised dryness. About 16% of the area is in drought (D0–D4).
